PROFESSIONAL SUMMARY

Business professional with a background in accounting, an active professional licence and over eight years of accounting, financial and corporate experience — including enterprise ERP environments such as SAP and Oracle. I combine knowledge of business and financial processes with technical development in SQL, Python, pandas, Power BI, DAX, dimensional modelling, ETL and automation. Career direction in Data Analytics, Business Intelligence and Analytics Engineering, at the intersection of business and technology. Currently pursuing postgraduate studies in Data Science & Big Data Analytics and in Data Engineering.

AT A GLANCE

CURRENT ROLE	Accounting Assistant — Addcon Contabilidade (since Jul 2026)
EDUCATION	Postgraduate specialisation in Data Science and Big Data Analytics — in progress Postgraduate specialisation in Data Engineering — in progress BSc in Accounting — Federal University of Juiz de Fora, UFJF (2016–2024)
LICENCE	CRC-MG 136287/O — active (Brazilian Regional Accounting Council)
CORE STACK	SQL · Python · pandas · Power BI · DAX · ETL · Dimensional modelling · Git
ERP SYSTEMS	SAP · Oracle · AlterData · Questor · Domínio · Prosoft · Superlógica
LANGUAGES	Portuguese (native) · English (advanced) · Italian (basic)

DATA PROJECTS

Open data — 13 datasets published on Kaggle

2026

Over 1 million cleaned records · kaggle.com/ramostherunning

- Nine football datasets with match- and player-level statistics from the Premier League, LaLiga, Serie A, Ligue 1, Champions League and MLS, standardised across seasons and unified per competition — including 56,310 player-match records and 11.5k cards with referee, minute and reason.
- Four endurance-sport datasets, among them the 931,958 results from 24 editions of the Chicago Marathon.
- Juiz de Fora municipal street-running ranking extracted from official PDFs: 48,722 results, 50 events and 17,787 athletes pseudonymised before publication, as identifiable individuals.
- Every dataset published with a declared grain, column dictionary, explicit licence and recorded limitations; average usability score of 0.90 on Kaggle's metric.

Football Intel — sports intelligence platform

In progress

Python · pandas · JavaScript · 9,051 matches · 13 competitions · 42,547 card events

- Python pipeline that ingests, audits and cleans the source data, regenerating a data-quality report on every run: 1,084 duplicate rows removed, 100% of mojibake-corrupted names recovered.
- Custom statistical engine in JavaScript: Welch's t-test with Satterthwaite degrees of freedom, Wilson confidence intervals, Benjamini-Hochberg correction for multiple comparisons, and empirical Bayesian shrinkage for small-sample rankings.
- Advanced-metric validation by distribution (metric × competition) rather than row by row, preserving 339 of 450 combinations — 75.3% versus 3.4% with the conventional approach.
- 17-screen dashboard with a hand-written SVG charting library and zero external dependencies: runs offline, with no server.
- Accessibility audited at runtime: 67/67 charts with text descriptions, 237/237 table headers scoped; zero horizontal overflow at 500, 750 and 1006 px.
- Dataset limitations declared in the interface itself — card-minute censoring, partial coverage of advanced metrics, and the absence of a player identifier.

Chicago Marathon Analytics — end-to-end analytics pipeline

Python · SQL · Power BI

Public dataset published on Kaggle · 931,958 records · 24 editions (2000–2025)

- Ingestion, cleaning and transformation of 931,958 finisher records.
- Star-schema dimensional model — one fact table and five conformed dimensions.
- Athlete identity resolution with a deterministic MD5 hash key, making the pipeline idempotent.
- Country-code standardisation across ISO 3166 and IOC; resolution of bib-number collisions across genders.
- 17 validated SQL analyses using CTEs and window functions; matplotlib visualisations and a Power BI dashboard.
- README and reproducibility guide; dataset published under the ODbL licence.

I Got It — music discovery platform

In production

React 19 · TypeScript · Vite · Tailwind · Vitest · ~12k lines · i-got-it-eosin.vercel.app

- Live application on Vercel: search by a remembered lyric fragment, synchronised karaoke, discographies, biographies, audio previews and per-entity shareable links.
- Four-layer architecture with an explicit boundary between public metadata and licensed content, which allows browsing a full album without requesting a single lyric and swapping the lyrics provider without touching navigation.
- SEO solved inside a SPA: meta tags and structured data are generated client-side for Google and, from the same description, by a serverless pre-rendering function for social crawlers that do not execute JavaScript.
- Two-layer cache (memory and local storage) with stale-while-revalidate and LRU eviction, exposed to React through a single integration point.
- API key kept out of the bundle behind a server-side proxy, restricted to its own origin and rate-limited per IP; the app is fully functional with no key at all.
- Strict TypeScript, Vitest coverage over routing, SEO, caching and response normalisation, and a type check enforced at build time.

PROFESSIONAL EXPERIENCE

Accounting Assistant

Jul 2026 — Present

Addcon Contabilidade · Juiz de Fora, Brazil

- Took full ownership of an operational accounting portfolio after a colleague left, becoming productive in the AlterData ERP within weeks.
- Bank reconciliation routines and generation/import of accounting entries.
- Documented the entire process in a step-by-step manual, standardising the routine and shortening onboarding for new assistants.

Accounting Assistant

Jul 2024 — Jun 2026

Maximum Assessoria Contábil · Juiz de Fora, Brazil · promoted from Accounting Clerk to Accounting Assistant in Jan 2026

- Automated repetitive month-end close activities using Excel and Python, cutting manual rework in recurring processes.
- Account reconciliation, bank statement entries and balance sheet review.
- Fixed-asset depreciation control and calculation; contract recognition and posting.
- Statutory filings (REINF, DCTF, DIMOB), identifying inconsistencies before submission.
- Built structured spreadsheets and dashboards for internal control.
- Day-to-day operation of the Questor and Domínio ERPs.

Finance / Accounting Assistant

Jan 2024 — May 2024

Universal Imóveis LTDA · Juiz de Fora, Brazil

- Monthly financial statements for residential condominiums, with payment and receivable analysis.
- Financial and accounting reconciliation; management reporting.
- Operation of the Superlógica system.

Accounting Intern

Apr 2022 — Dec 2023

MRS Logística S.A. · Juiz de Fora, Brazil · publicly listed company

- Accounting entries, account reconciliation and accruals in a large corporate environment.
- Hands-on experience with enterprise-grade ERP: SAP and Oracle.
- Work under standardised financial processes and formal controls.

Administrative Apprentice

Feb 2021 — Jan 2022

Auto Posto Terras Brasilis · Juiz de Fora, Brazil

- Administrative routines: document organisation, goods receipt control and timekeeping.

Intern — Payroll and Accounting

Jun 2018 — Jun 2019

Maximum Assessoria Contábil LTDA-ME · Juiz de Fora, Brazil

- Payroll routines, then transition to the accounting department.
- Reconciliation and accounting analysis with Prosoft and Questor.

EDUCATION

Data Science and Big Data Analytics

In progress

Postgraduate specialisation

Data Engineering

In progress

Postgraduate specialisation

BSc in Accounting

Mar 2016 — Jul 2024

Federal University of Juiz de Fora (UFJF)

- Active professional licence: CRC-MG 136287/O.
- Teaching assistant in Labour Law & Management and Commercial & Corporate Management (Jun 2021 – Feb 2022).

CONTINUING EDUCATION

DATABRICKS DEVELOPER	Spark, SQL and Python for data — Udemy · Jan 2026 – in progress
POWER BI COMPLETE	Beginner to advanced — Udemy · Jan 2026 – in progress
DATA ANALYSIS	SQL, Power BI and Python — Bruno Fonseca · Oct 2025 – in progress
DATA ENGINEERING	Fundamentals — Data Science Academy · Nov – Dec 2025
GOOGLE DATA ANALYTICS	Professional Certificate — Coursera / Google · Oct – Dec 2025

TECHNICAL SKILLS

DATA & ANALYTICS	SQL · Python · pandas · Power BI · DAX · Data visualisation · Exploratory analysis

DATA ENGINEERING	ETL · Dimensional modelling · Star schema · DuckDB · Databricks · Apache Spark · pdfplumber · Automation · Git / GitHub
ENTERPRISE SYSTEMS	SAP · Oracle · AlterData · Questor · Domínio · Prosoft · Superlógica
BUSINESS	Statutory accounting · Corporate finance · Financial close · Account reconciliation · Statutory filings · Advanced Excel
